READING COMPREHENSION

Directions: This section contains 2 passages, each followed by a number of questions (1-18). Read the passages and for each question, choose the one best answer (A), (B), (C), (D) based on what is stated in or what can be inferred from the passage. Then, on your answer sheet, tick the letter of the answer you have selected.

TEXT 1

Jupiter is the largest and most massive planet and is fifth in order of distance from the sun. It is well placed for observation for several months in every year and on average is the brightest of the planets apart from Venus, though for relatively brief periods Mars may outshine it. Jupiter's less than 10-hour rotation period gives it the shortest day in the solar system insofar as the principal planets are concerned. There are no true seasons on Jupiter because the axial inclination to the perpendicular of the orbital plane is only just over 3°-less than that for any other planet.

The most famous mark on Jupiter is the Great Red Spot. It has shown variations in both intensity and colour, and at times it has been invisible, but it always returns after a few years. At its greatest extent it may be 40,000 kilometres long and 14,000 kilometres wide, so its surface area is greater than that of Earth. Though the latitude of the red spot varies little, it drifts about the longitude. Over the past century, the total longitudinal drift has announced to approximately 1200°. The latitude is generally very close to -22°. It was once thought that the Red Spot might be a solid or semisolid body floating in Jupiter's outer gas. However, the Pioneer and Voyager results have refuted that idea and proven the Red Spot to be a phenomenon of Jovian meteorology. Its longevity may well be due to its exceptional size, but there are signs that it is decreasing in size and may not be permanent. Several smaller red spots have been seen occasionally but have not lasted.

1. The main purpose of the passage is:

A) To explain why the Great Red Spot changes
B) To show which of the planets shines the brightest
C) To give an introduction to Jupiter and its Red Spot
D) To prove that Jupiter is shrinking

2. According to the passage, Jupiter has the shortest day among the principal planets because

A) its rotation period is shorter than 10 hours
B) the axial inclination is only just over 3°
C) it is on the average the brightest of all the planets
D) there is the interference of the Great red Spot

3. The author's tone in this passage is:

A) Argumentative
B) Supportive.
C) Enthusiastic
D) Neutral

4. According to the passage, Mars outshines Jupiter

A) on a regular basis.
B) from time to time.
C) every several months
D) less often than any other planet

5. This passage would be of most interest to

A) students of anthropology.
B) geologists.
C) mathematicians.
D) Amateur astronomers

6. It can be inferred from this passage that Jupiter great red spot

A) will become brighter with time .
B) will one day vanish.
C) will continue expanding.
D) is made of floating gas

7. The word 'intensity' in line 7 could best be replaced with

A) visibility
B) density.
C) brilliance.
D) surface area

8. According to the passage, all of the following are true about Jupiter EXCEPT

A) there are four planets closer to the sun.
B) it is 14.000 kilometers wide.
C) there is still much to be learned about the Red Spot.
D) Pioneer and Voyager have added to our knowledge of Jupiter.

TEXT 2:

Today's cars are smaller , safer, cleaner, and more economical than their predecessors, but the car of the future will be far more pollution-free than those on the road today. Several new types of automobile engines have already been developed that run on alternative sources of power, such as electricity, compressed natural gas, methanol, steam, hydrogen, and propane. Electricity, however, is the only zero-emission option presently available.

Although electric vehicles will not be truly practical until a powerful, **compact** battery or other dependable source of current is available, transportation experts foresee a new assortment of electric vehicles entering everyday life: shorter-range commuter electric cars, three-wheeled neighborhood cars, electric delivery vans, bikes and trolleys.

As automakers work to develop practical electrical vehicles, urban planners and utility engineers are focusing on infrastructure systems to support and make the best use of the new cars. Public parking spots on the street or in commercial lots will need to be equipped with devices that allow drivers to change their batteries while they shop, dine, or attend a concert. To encourage the use of electric vehicles, the most convenient parking in transportation centers might be reserved for electric cars.

Planners **foresee** electric shuttle buses , trains, buses, and neighborhood vehicles all meeting at transit centers that would have facilities for charging and renting. **Commuters** will be able to rent a variety of electric cars to suit their needs: light trucks, one person three-wheelers, small cars, or electric/gasoline **hybrid** cars for longer trips, which will no doubt take place on automated freeways capable of handling five times the number of vehicles that can be carried by a freeway today.

9. The following electrical vehicles are all mentioned in the passage EXCEPT

A) vans B) trains C) planes D) trolleys

10. The author's purpose in the passage is to

A) criticize conventional vehicles
B) support the invention of electric cars
C) narrate a story about alternative energy vehicles
D) describe the possibilities for transportation in the future

11. The passage would most likely be followed by details about

A) automated freeways
B) pollution restrictions in the future'
C) the neighborhood of the future
D) electric shuttle buses

12. The word 'compact' in line 6 is closest in meaning to

A) long-range B) inexpensive C) concentrated D) square

13. In the second paragraph, the author implies that

A) a dependable source of electric energy will eventually be developed
B) everyday life will stay much the same in the future
C) a single electric vehicle will eventually replace several modes of transportation
D) electric vehicles are not practical for the future

14. According to the passage, public parking lots of the future will be

A) more convenient than they are today
B) equipped with charging devices
C) much larger than they are today
D) as common as today's gas stations
